Metal Detectable technopolymer

MALZEME

Glass-fibre reinforced polyamide based (PA) technopolymer, RAL 5001 blue colour, matte finish.

FDA uyumlu hammaddeden üretilmiştir (FDA CFR.21 ve EU 10/2011). The special technopolymer contains additives detectable by means of metal detectors.

STANDART UYGULAMA

AISI 303 paslanmaz çelik göbek, dişi kör delik.

ÖZELLİKLER VE UYGULAMALAR

The RAL 5001 blue colour is easily visible in case of accidental food contamination. Furthermore the material additives are metal detectable at a cubic particle size of 5mm per side.

In order to improve the detection, the metal detector calibration must take into account the food/substance type at risk of contamination considering the moisture contained in it.

Particularly suitable for applications in the food and pharmaceutical industries.
