

Ayarlanabilir kollar

Teknopolimer

KALDIRMA KOLU GÖVDESİ

Cam elyafıyla güçlendirilmiş poliamid bazlı (PA) teknopolimer, Elecolors renklerde, mat yüzey.

BASMA DÜĞMESİ

Elecolors renklerde teknopolimer, parlak kaplamalı.

STANDART UYGULAMALAR

İlk gerilmeyi daha kolay hale getirmek için, çıkıntı yapan parça üzerinde tırtıklı, tutma pimli, siyah renkli, cam elyaf takviyeli teknopolimer sıkma elemanı. AISI 302 paslanmaz çelik dönüş yayı.

- **ERX-B:** piring göbek, dişli kör delik.
- **ERX-SST:** AISI 303 paslanmaz çelik göbek, dişli kör delik.
- **ERX-p:** çinko kaplı çelik saplama, pah açılmış düz uçlu UNI 947 : ISO 4753 göre (bakınız Teknik veriler).
- **ERX-SST-p:** AISI 303 paslanmaz çelik dişli somun, oluklu düz uç UNI 947 : ISO 4753 (bkz. Teknik veriler).

ÖZELLİKLER VE UYGULAMALAR

Özellikle, yer yokluğu nedeniyle kaldırma kolunun dönme açısının limitli olduğu durumlar için uygundur.

Metal tespit vidalı ayarlanabilir kolların diğer tiplerine kıyasla bu çözüm aşağıdakileri sağlar:

- operatör için mutlak elektrik yalıtımı
- görünen paslanmış hiçbir çelik parça yoktur
- kaldırma kolunu konforlu bir şekilde serbest bırakma özelliği.

GERİLİME DİRENÇLİ

Ayarlanabilir kollar genellikle tekrarlamalı kenetleme işlemleri için bazen yüksek frekanslı olarak kullanılır.

Bununla beraber, kol ünitesinin gerilme dayanımı (yani sıkma döngülerinin tekrarının dayanımı) bilhassa önemlidir ve özellikle, elmas kesim malzemenin mukavemeti çünkü koldan dişli saplamaya sıkma kuvvetini iletir (gövde veya saplama).

Aslında, birçok laboratuvar testinin sonuçları, en zor kullanım koşullarını simüle eden özel bir alet yardımıyla yapıldı, bize örnek olarak ERX.78 ayarlanabilir kolun 490 N çalışma kuvvetinin altında eğilmeden 100.000 sıkma döngüsünden fazla dayanabileceğini gösterdi (grafığe bakınız).

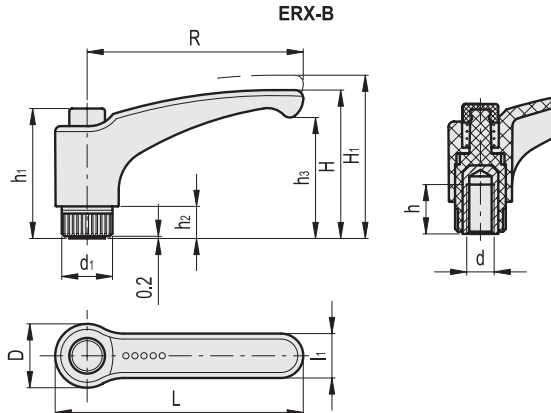

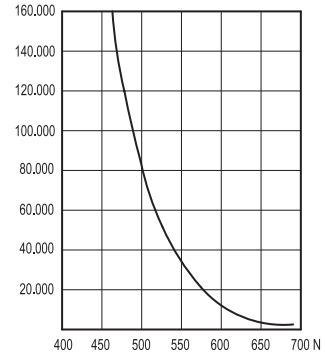

Özel cam elyafı ile güçlendirilmiş teknopolimer, ELESa marka ayarlanabilir kolların, normal çalışma koşulları altında oluşanlardan çok daha yüksek gerilme direnci vermesini sağlar.

KULLANIM TALİMATLARI

Bağlamak için, kolu kaldırıp bağlantı parçasının dişlerini serbest bırakın ve başlangıç pozisyonuna geri getirin. Kolu bıraktığınız anda yay yardımı ile otomatik olarak dişler yeniden birleşir.
